

HUMAN REPEATED INSULT PATCH TEST WITH CHALLENGE

Premium Moisturising Hand Sanitiser

We are proud to announce the results of our dermatological testing, proving our product is safe for all skin types. A study was conducted using 53 test subjects with sensitive skin on their body under semi-occlusive patch testing. It lasted three consecutive weeks, the period necessary to induce a possible allergy (induction period). Based on these results, our product has a very good skin compatibility and does not show a sensitising effect.

What this means the product can be used on people with both normal and sensitive skin as well as being hypoallergenic. This makes it safe for daily multi-use and safe for everyone in your family, from young children to elderly adults. Our team has worked hard to ensure the safety of our product, and we are thrilled that it passed with flying colours!

People with all skin types can now safely use Premium Moisturising Hand Sanitiser without fear of irritation or allergic reactions. This will help make people's lives easier by providing them with an effective yet gentle solution they can trust.

"We are delighted that our product has been proven safe for all skin types," said our founder, Jill Jusuf. "Safety is always our top priority when developing new products".

We strive to provide high-quality products that everyone can use without worry or hesitation. Our goal is always customer satisfaction, and we hope you will turn to us when looking for your next hand sanitiser. With its proven safety, you can trust that our dermatologically tested product will provide lasting results with no unwanted surprises!
